In the temperate and tropical regions where it appears that hominids evolved into human beings, the principal food of the species was vegetable. Sixty-five to eighty percent of what human beings ate in those regions in Paleolithic, Neolithic, and prehistoric times was gathered; only in the extreme Arctic was meat the staple food. The mammoth hunters spectacularly occupy the cave wall and the mind, but what we actually did to stay alive and fat was gather seeds, roots, sprouts, shoots, leaves, nuts, berries, fruits, and grains, adding bugs and mollusks and netting or snaring birds, fish, rats, rabbits, and other tuskless small fry to up the protein. And we didn't even work hard at it—much less hard than peasants slaving in somebody else's field after agriculture was invented, much less hard than paid workers since civilization was invented. The average prehistoric person could make a nice living in about a fifteen-hour work week.

Fifteen hours a week for subsistence leaves a lot of time for other things. So much time that maybe the restless ones who didn't have a baby around to enliven their life, or skill in making or cooking or singing, or very interesting thoughts to think, decided to slope off and hunt mammoths. The skillful hunters then would come staggering back with a load of meat, a lot of ivory, and a story. It wasn't the meat that made the difference. It was the story.

It is hard to tell a really gripping tale of how I wrested a wild-oat seed from its husk, and then another, and then another, and then another, and then another, and then I scratched my gnat bites, and Qool said something funny, and we went to the creek and got a drink and watched newts for a while, and then I found another patch of oats... No, it does not compare, it cannot compete with how I thrust my spear deep into the titanic hairy flank while Oob impaled on one huge sweeping tusk, writhed screaming,
and blood spouted everywhere in crimson torrents, and Boob was crushed
to jelly when the mammoth fell on him as I shot my unerring arrow straight
tough eye to brain.

That story not only has Action, it has a Hero. Heroes are powerful. Be-
fore you know it, the men and women in the wild-oat patch and their kids
and the skills of the makers and the thoughts of the thoughtful and the
songs of the singers are all part of it, have all been pressed into service in
the tale of the Hero. But it isn't their story. It's his.

When she was planning the book that ended up as Three Guineas, Vir-
ginia Woolf wrote a heading in her notebook, “Glossary”; she had thought
of reinventing English according to a new plan, in order to tell a different
story. One of the entries in this glossary is heroism, defined as “botul-
ism.” And hero, in Woolf's dictionary, is “bottle.” The hero as bottle, a string-
revaluation. I now propose the bottle as hero.

Not just the bottle of gin or wine, but bottle in its older sense of container
in general, a thing that holds something else.

If you haven't got something to put it in, food will escape you—even
something as uncombative and unresourceful as an oat. You put as many
as you can into your stomach while they are handy, that being the primary
container; but what about tomorrow morning when you wake up and it's
cold and raining and wouldn't it be good to have just a few handfuls of
oats to chew on and give little Oom to make her shut up, but how do you
get more than one stomachful and one handful home? So you get up and
go to the damned soggy oat patch in the rain, and wouldn't it be a good
thing if you had something to put Baby, Oo Oo in so that you could pick
the oats with both hands? A leaf a gourd a shelf a net a bag a sack a
bottle a pot a box a container. A holder. A recipient.

The first cultural device was probably a recipient... Many theorizers feel that
the earliest cultural inventions must have been a container to hold gathered
products and some kind of slang or net carrier.

So says Elizabeth Fisher in Women's Creation (McGraw-Hill, 1975). But
no, this cannot be. Where is that wonderful, big, long, hard thing, a bone,
I believe, that the Ape Man first bashed somebody with in the movie and
then, grunting with ecstasy at having achieved the first proper murder,
flung up into the sky, and whirling there it became a space ship thrusting
its way into the cosmos to fertilize it and produce at the end of the movie a
lovely fetus, a boy of course, drifting around the Milky Way without (oddly
enough) any womb, any matrix at all? I don't know. I don't even care. I'm
not telling that story. We've heard it, we've all heard all about all the sticks
and spears and swords, the things to bash and poke and hit with, the long,
hard things, but we have not heard about the thing to put things in, the
container for the thing contained. That is a new story. That is news.

And yet old. Before—once you think about it, surely long before—the
weapon, a late, luxurious, superfluous tool; long before the useful knife
and ax; right along with the indispensable whacker, grinder, and digger—
for what's the use of digging up a lot of potatoes if you have nothing to lug
the ones you can't eat home in—with or before the tool that forces energy
outward, we made the tool that brings energy home. It makes sense to me.
I am an adherent of what Fisher calls the Carrier Bag Theory of human
evolution.

This theory not only explains large areas of theoretical obscurity and
avoids large areas of theoretical nonsense (inhabited largely by tigers, foxes,
and other highly territorial mammals); it also grounds me, personally, in
human culture in a way I never felt grounded before. So long as culture
was explained as originating from and elaborating upon the use of long,
hard objects for sticking, bashing, and killing, I never thought that I had,
or wanted, any particular share in it. (“What Freud mistook for her lack
of civilization is woman's lack of loyalty to civilization,” Lillian Smith ob-
served.) The society, the civilization they were talking about, these theoreti-
cians, was evidently theirs; they owned it, they liked it; they were human,
fully human, bashing, sticking, thrusting, killing. Wanting to be human
too, I sought for evidence that I was; but if that's what it took, to make a
weapon and kill with it, then evidently I was either extremely defective as
a human being, or not human at all.

That's right, they said. What you are is a woman. Possibly not human
at all, certainly defective. Now be quiet while we go on telling the Story of
the Ascent of Man the Hero.

Go on, say I, wandering off towards the wild oats, with Oo Oo in the
sling and little Oom carrying the basket. You just go on telling how the
mammoth fell on Boob and how Cain fell on Abel and how the bomb fell
on Nagasaki and how the burning jelly fell on the villagers and how the
missiles will fall on the Evil Empire, and all the other steps in the Ascent
of Man.

If it is a human thing to do to put something you want, because it's
useful, edible, or beautiful, into a bag, or a basket, or a bit of rolled bark
or leaf, or a net woven of your own hair, or what have you, and then take it home with you, home being another, larger kind of pouch or bag, a container for people, and then later on you take it out and eat it or share it or store it up for winter in a solider container or put it in the medicine bundle or the shrine or the museum, the holy place, the area that contains what is sacred, and then next day you probably do much the same again—if to do that is human, if that's what it takes, then I am a human being after all. Fully, freely, gladly, for the first time.

Not, let it be said at once, an unaggressive or uncombative human being. I am an aging, angry woman laying mightily about me with mlhmd!3gl thrusting, raping, killing, about the Hero. The wonderful, poisonous story of Botulism. The killer story.

It sometimes seems that that story is approaching its end. Lest there be no more telling of stories at all, some of us out here in the wild oats, amid the alien corn, think we'd better start telling another one, which maybe people can go on with when the old one's finished. Maybe. The trouble is, we've all let ourselves become part of the killer story, and so we may get finished along with it. Hence it is with a certain feeling of urgency that I seek the nature, subject, words of the other story, the untold one, the life story.

It's unfamiliar, it doesn't come easily, thoughtlessly to the lips as the story that makes the difference. It is the story that hid my humanity from me, the story the mammoth hunters told about bashing, thrusting, raping, killing, about the Hero. The wonderful, poisonous story of Botulism. The killer story.

The novel is a fundamentally unheroic kind of story. Of course the Herculean, Promethean, unexamined shorthand standing for the "hard" sciences and high technology founded upon continuous economic growth, is a heroic undertaking, Herculean, Promethean, conceived as triumph, hence ultimately as tragedy. The fiction embodying this myth will be, and has been, triumphant (Man conquers earth, space, aliens, death, the future, etc.) and tragic (apocalypse, holocaust, then or now).

If science fiction is the mythology of modern technology, then its myth is tragic. "Technology," or "modern science" (using the words as they are usually used, in an unexamined shorthand standing for the "hard" sciences and high technology founded upon continuous economic growth), is a heroic undertaking, Herculean, Promethean, conceived as triumph, hence ultimately as tragedy. The fiction embodying this myth will be, and has been, triumphant (Man conquers earth, space, aliens, death, the future, etc.) and tragic (apocalypse, holocaust, then or now).

If, however, one avoids the linear, progressive, Time's-(killing)-arrow mode of the Techno-Heroic, and redefines technology and science as pri-
mainly cultural carrier bag rather than weapon of domination, one pleasant side effect is that science fiction can be seen as a far less rigid, narrow field, not necessarily Promethean or apocalyptic at all, and in fact less a mythological genre than a realistic one.

It is a strange realism, but it is a strange reality.

Science fiction properly conceived, like all serious fiction, however funny, is a way of trying to describe what is in fact going on, what people actually do and feel, how people relate to everything else in this vast sack, this belly of the universe, this womb of things to be and tomb of things that were, this unending story. In it, as in all fiction, there is room enough to keep even Man where he belongs, in his place in the scheme of things; there is time enough to gather plenty of wild oats and sow them too, and sing to little Oom, and listen to Ool’s joke, and watch newts, and still the story isn’t over. Still there are seeds to be gathered, and room in the bag of stars.

JOSEPH W. MEEKER

The Comic Mode

THE BIOLOGY OF COMEDY

Literary criticism has asserted from its beginnings the idea that literature is essentially an imitation of the actions of men. Few have disputed the doctrine of mimesis first spelled out in ancient Greece in Plato’s Republic and revised in Aristotle’s Poetics, though subsequent critics have modified the interpretation of the term mimesis. Without going into the niceties of the argument, let me merely assume in a simpleminded way that literature does imitate human actions, and consider two examples of such imitation. Both seek to reproduce the same fictional action, but from different historical perspectives and using different literary modes.

The first example is Oedipus the King, written in the fifth century B.C. by the Greek dramatist Sophocles. Early in the play Teiresias, the blind seer, confronts the king with the suggestion that the murderer he is seeking is perhaps Oedipus himself.

Teiresias
I say you are the murderer of the king whose murderer you seek.
Oedipus
Not twice you shall say calumnies like this and stay unpunished.
Teiresias
Shall I say more to tempt your anger more?
Oedipus
As much as you desire; it will be said in vain.
